

SAFETY PRACTICES - OVERHEAD ITEMS

Do NOT remove, cover, or tamper with smoke detectors. If the smoke detector is “chirping” please contact Plant Services. The detectors are designed to communicate with each other, so tampering with a smoke detector will *not* make it quiet.

Do NOT hang anything on exposed pipes, sprinkler heads or overhead grilles.

Do NOT drape wiring across T-bar framework. The stress from the weight of the ceiling tiles can cause breakage in the wiring, creating a hazard.

Simple hanging clips can be created using paper clips. Use clips instead of draping items over the T-bar framework.

Instead, use a paperclip or hook to fasten the item. Keep in mind that nothing is allowed to dangle from the ceiling lower than 7' from the floor.
